

operational Roadmap

FABLEVERSE: Mature Romance Launch — Strategic Week Plan (Tuesday–Friday)

Goal: Launch by **Friday**, achieve measurable lift in message volume, sign-ups, and D1/D7 retention.

TUESDAY — DEFINE EXPERIENCE AND ALIGN ON LOGIC

Focus: Finalize creative vision and logic alignment across teams while testing the model behavior.

Goal: Establish what the *Mature Romance experience should feel like*, how it functions, and where we see gaps.

Strategic Priorities

- **Creative:** Define the emotional tone, story feel, and pacing of the experience. How should the transition into Mature Romance Mode feel? THEN TEST WHAT WE HAVE. How do we ensure it stays immersive and plot-driven rather than mechanical? Send notes to AI to adjust.
- **AI & Product:** Align on trigger logic and edge cases — what words or patterns activate the mode, and how do we handle gray areas (non-romantic triggers, accidental activation, harassment)?

Marketing + product: Align on PMM.

- **Engineering:** Verify the current model switching logic works smoothly and document any visible latency or user flow friction. Start testing for scale issues, what happens at 50, 100, 200 msgs?
- **Marketing:** Begin framing how this feature should be positioned — brainstorm tagline direction and awareness hooks (“Dynamic Romance,” “Unfiltered Connection,” etc.). Begin working on assets.
- **Data:** Confirm what we’ll measure post-launch (message lift, opt-in rate, retention deltas). What points should we track.

Example Outputs

- Shared “Experience Flow” Miro diagram mapping the trigger → consent → mode → return journey.
 - Defined tone document (romantic, cinematic, grounded).
 - Confirmed event tracking plan for post-launch analysis.
-

WEDNESDAY — BUILD, TEST, AND POLISH THE EXPERIENCE

Focus: Turn alignment into a tangible, immersive product experience.

Goal: Have the full experience visually, emotionally, and technically working by end of day.

Strategic Priorities

- **Creative + AI:** Run model testing sessions and refine dialogue flow for better tone, pacing, and immersion. Write improved prompt and system messages that guide natural emotional progression. Assisting with Copy
- **Product & Design:** Integrate + build core needed page areas & transitions such as: shimmer effects, modal transitions, color shifts, and banners. Finalize the “moment” of entry into Mature Mode — make it cinematic and responsive.
- **Engineering:** Implement updated visual logic and finalize any backend connections for stability.
- **Marketing:** Draft final copy for homepage, discover, blog, and Discord/Email announcements. Influencers? Contest? Create mockups for key promotional touchpoints.

Example Outputs

- Functioning product flow from trigger → confirmation → switch → continued roleplay.
- Visuals approved for shimmer and animation.
- Draft marketing assets (homepage banner, one-time pop, email subject line).

THURSDAY — INTERNAL + External QA, CREATIVE TESTING, AND PRE-LAUNCH READINESS

Focus: Run final QA, conduct creative-led user testing, and refine copy and tone based on live behavior.

Goal: Confirm readiness for public launch through creative-led validation of emotion, accuracy, and stability.

Strategic Priorities

- **Creative (lead):** Own the testing experience. Run live sessions to see how users transition, react, and feel during roleplay. Take super users from Discord. Run testing circles within the company. Adjust copy and flow for better immersion and tone. Final working with AI to make last second changes.
- **AI & Product:** Rapidly iterate based on creative feedback — fix awkward edge cases, tone mismatches, or moments of dead air in the flow.
- **Design & Engineering:** Final polish — fix UI inconsistencies, finalize shimmer and modal animations, and test on multiple devices.
- **Marketing:** Prepare launch content (banners, Discover assets, blog, Discord, and email) for same-day approval and queue.
- **Data:** Confirm all tracking events fire correctly and dashboard is ready for live data capture.

Example Outputs

- Finalized copy and visual polish for launch.
- Internal QA report confirming readiness.
- Marketing assets and posts approved and scheduled.
- Pre-launch signoff meeting confirming go/no-go.

FRIDAY — FULL LAUNCH AND IMPACT MEASUREMENT

Focus: Launch to 100% of users, activate marketing channels, and monitor immediate engagement.

Goal: Drive measurable lift in messages per user, sign-ups, and retention; evaluate feature impact and user sentiment.

Strategic Priorities

- **Product + Engineering:** Deploy live to full user base. Monitor stability, latency, and feature activation rate.
- **Creative:** Monitor real-time sessions for tone and engagement; provide rapid feedback loops if something feels off.
- **Marketing:** Execute full campaign launch — homepage banner, Discover swimlane, blog, email, and Discord announcement. Begin paid ad tests for BookTok, AI chat, and anime audiences.
- **Data:** Report key metrics by EOD — message lift, opt-in conversion, and sign-up delta vs. baseline.
- **Leadership:** Review early data and user sentiment EOD Friday, decide if weekend marketing ad acceleration sprint is needed.

Example Outputs

- Live feature and campaign across all surfaces.
- End-of-day data snapshot (engagement, conversion, retention lift).
- Creative + Product feedback doc for next iteration round.

Product Design Work 10.28

1. DISCOVERY & ENTRY POINTS

Two quick notes:

1. I wrote out all this then used GPT to help me structure and organize it. Please let me know if you need any clarification.
2. Anything that is copy within this document is placeholders for Alex to confirm.

Goal: Users immediately understand that something *new, exciting, and slightly forbidden* has arrived — and it's easy to access.

- **Discover Banner:** Top hero banner introducing *Mature Romance Mode*. Keep copy short, evocative (“Experience unfiltered romance. Enter if you dare.”).
- **New Pill Tag:** Add #MatureRomance or #Unfiltered next to other tags. This should be first & have a different color/a glowing border to stand out ... its limited — clicking opens a filtered view.
- **Filtered View:** Displays NSFW or mature characters + “Create Your Own” CTA in the middle. Can be a basic swimlane page but the create your own should be center & unique looking
- **Hamburger Menu Badge:** Replace “New” tag near “Create” with “❤️ Romance Mode” or “❤️ New Mode.”

2. DISCOVER PAGE & SWIMLANE VISUALS

Goal: Differentiate the mode visually and emotionally — it should *feel like its own realm*.

- **Distinct Swimlane Title:** Experiment with adjusting the first swim lane to potentially look different from the others to showcase this new feature. Maybe there's some sort of basic gradient in the background, or the swim lane has some sort of slightly different design which makes it differentiate from others. This can also be the second or third swim lane. It doesn't necessarily need to be the first based on what looks the best.

We can also have maybe a little icon that points to it, that says "New Mature Romance," that goes on the corner of this swim lane to bring attention to it

"Top Unfiltered Stories" or "Top Mature Romance Stories."

Final Card CTA: The last card in this swimlane reads "Create Your Own," directly embedded in the lane.

- **New Icon:** A "NEW" badge to highlight the section.

3. IN-CHAT EXPERIENCE

Goal: Make the transition into Mature Romance Mode feel cinematic, emotional, and irreversible — a *mode shift*, not a UI tweak.

- **Trigger-based shimmer animation** when the user types an activating phrase.
- **Bubble shapes subtly morph** into rounded heart-like forms.
- **Background color transition** to a soft pink/red gradient.
- **QAB (Quick Action Bar)** recolors to match mode theme.
- **Confirmation pop-up:** Explains what's happening and confirms consent.

When a user writes a trigger word, we need a sort of basic shimmer animation that takes over the screen and changes the elements. I would love for the bubbles to almost become slightly more like hearts. The background to change for every fable to maybe potentially be some more hearts. And the background turns maybe a gradient pink/reddish that looks good with a bubble color that changes as well. Maybe even the QAB the quick action bar at the bottom adjusts as well in color in some way. We want it to feel like a user went to a new mode. We will need to design the animation. These changes we will need to build out. We will need a pop-up and make that pop-up feel creative and immersive, where a user can select this new mode, a confirmation that a user is then in the mode, and then for these effects to play out

Additions & polish

1. **Animated Mode Transition (key innovation):**
Instead of an instant color swap, fade through a 1-second transition like:

- Screen pulse → shimmer effect → subtle bloom → new palette loads.
It should feel like the world changed around them, not a hard switch.
2. **Narrative Confirmation Modal:**
Instead of plain “You’re entering Mature Romance Mode,” pop up use narrative tone & a better looking pop up to get narrative confirmation for a user :

“The air shifts. Do you want to explore this connection deeper?”
Buttons: “Yes, continue” / “Not now.”
Same compliance effect, but emotionally resonant.
 3. **Persistent Mode Indicator:**
A small glowing heart in the top right of chat signals the user is “in mode.” Clicking it gives an option to “Exit Mode.” NIDIAL YOU NEED TO CONNECT WITH BOTH DEXTER + ARVIN IN A SLACK THREAD TO CONFIRM WE BUILD THIS.
 4. **Visual “Pulse” on Entry:**
The chat background or bubbles briefly pulse once on mode entry — subtle, heartbeat-like animation, symbolizing intensity.
 5. **SEE Button Variant:**
Update SEE icon in this mode with a pinkish hue or heart accent to signify “Mature Visuals Active.”

4. EDUCATION & POP-UPS

Goal: Teach users *how to activate it* and *why it’s worth exploring*.

- **First-time entry pop-up** explaining how to trigger and what it unlocks. EX: “Type Mature Romance or anything that would naturally indicate you want to move into this mode”

Additions

1. **Mini Visual Tutorial Carousel:** After sign-up or first launch of Mature Mode, show a 3-panel carousel:
 - “Type naturally, explore deeper stories.”

- “Confirm to enter Mature Romance Mode.”
- “See your connection unfold in real time.”

5. BRANDING + FEEL (Tonal Unity)

Goal: Every surface feels connected to one cinematic idea — not disjointed elements.

- Reuse the *shimmer* effect motif everywhere: in chat, in pop-ups, and even behind the homepage banner.
- Keep tone consistent: seductive yet tasteful, cinematic not explicit.
- Define a micro language for UI copy — “Enter,” “Continue,” “Explore deeper,” instead of “Enable.”
